```

assets

- css contains compiled `nana.css` and `linea.css`
- fonts contains the font files
- images contains the page's images, divided by category. Put all of your images in this directory, as that's where they get optimised via [Gulp tasks](https://github.com/pimmey/nana-docs/wiki/12-Developing-with-Sass,-Pug-&-Gulp#tasks) (<https://github.com/pimmey/nana-docs/wiki/12-Developing-with-Sass,-Pug-&-Gulp#tasks>)
- js contains the core JavaScript file, config file and various custom scripts

favicons

This directory contains favicons. And a file called `manifest.json`, which you should edit by placing your company's name in it.

gulp

You can find gulp commands here, they are being injected into `gulpfile.js` in the project's root.

libs

The place for the libraries used in this template.

mailer

PHP files that are needed to make the contact form function are located here. In `templates` directory you'll be able to find the predesigned mail templates.

src

pug

- `./` (i.e. the directory itself) is the home directory of all your `.pug` files
- `components` contains reusable Pug components
- `layout` contains header and footer layouts
- `mixins` contains reusable mixins
- `modals` contains the source of modals used throughout the theme
- `section` is a directory for the sections source

SASS

- ./ contains the main nana.scss file as well as all of its components
- components holds styles for various components of the theme
