

## Contact form

In order to make the form work and send you the messages you need to configure it. The config file is placed in `mailer/` directory. Include all of the required information for the PHP mailer to do its magic.

## Troubleshooting

Sometimes, some complications might arise due to the specifics of your Hosting provider. Make sure you check out the [PHPMailer troubleshooting](https://github.com/PHPMailer/PHPMailer/wiki/Troubleshooting) (<https://github.com/PHPMailer/PHPMailer/wiki/Troubleshooting>) page in that case.
